Documentation

Developer : Bastisapp
Author name : bastikikang
Email : bastikikang@gmail.com
Author Link : https://codecanyon.net/user/bastikikang/portfolio
Software Framework : Yii, Vue 3, JS, Mysql and PHP
Date of release :

Table of contents

Requirements

Server requirements

- App can be installed in subdomain or main domain or folder
- If you want to install on localhost use XAMPP
- SSL is required for payment and social login and google api
- Server minimum requirements
  - PHP version 7.2 + (karenderia is build and stable in 7.2.16)
  - Mysql 5.6+
  - Mod_rewrite Apache
  - JSON php extension
  - MBstring php extension
  - PDO PHP extension
  - Ziparchive extension
  - Fileinfo Extension
  - GD Library (>=2.0) OR Imagick PHP extension (>=6.5.7

In most server, these extension are enabled by default, but you should check with your hosting provider.

How to activate your license

Steps are

- Open this link in your browser http://bastisapp.com/activation/
- In the respective fields, put your Name, E-mail, CodeCanyon Username, Purchase Key and your domain
- Click activate
- You can change the activation later from this same form. Activating a Regular license again with another domain name will remove the activation of the previous domain
- If your doing a test in your **localhost** enter a domain **localhost.com**

Where can I find the purchase code

- Login into your envato market account
- Hover the mouse over your username at the top of the screen.
- Click 'Downloads' from the drop-down menu.
- Click 'License certificate & purchase code' (available as PDF or text file).

  If you still cannot find it envato has a video and image preview where to get it
  Go to this link https://help.market.envato.com/hc/en-us/articles/202822600-Where-Is-My-Purchase-Code-

How to install script

To install the script follow the steps below.

- **Create a new database** from your server **MySQL database**
- Create a **DB user** to the database and link that database to the DB user.
- Extract the downloaded .zip file from codecanyon on your PC. You'll find a zip file named **install.zip** after extracting
- Upload the **Install.zip** file to your server **public_html** or **subdomain** directory you intend to
- run the script.
- Check the following folder permission make sure the permission is set to **755** or **777** in the following path **/upload , /protected/runtime** , **backoffice/protected/runtime**
- Set your **database credentials** open the file **k-config.php** set the value for **DB_NAME , DB_USER , DB_PASSWORD and DB_HOST.**
- Then, navigate your site URL example **http://yourserver.com/backoffice/install** in your browser and it will automatically take you to the installation wizard.
- Click on the Start Installation Process
- You will get the Checking File Permission page. If everything is ok then click on Go to the next step.
- Now you need to **import the SQL file**
- Now fill up the information of the shop and click Continue.
- Click on Go to Home/ Login to the admin panel.

Important: if you installing to a sub folder you need to update the .htaccess file with sub folder that you created both in main folder and backoffice folder

Best practice when going live

By default debug is **ON** to see the errors in your website this is good idea when your debugging your application but when going live we don't want others to see errors and server details.

- Open the file **index.php** and remove the line **defined('YII_DEBUG') or define('YII_DEBUG',true);**

- Also we need to remove this in backoffice panel open the **file backoffice/index.php** and remove

    defined('YII_DEBUG') or define('YII_DEBUG',true);

- Deleting the installer controller file in **backoffice/controller/InstallerController.php**

- Change the **CRON_KEY** value in **k-config.php**

    By default there is cron key set this is a unique key in order to protect any cron jobs in your

    server so no one can execute the cron outside your server.

    CRON_KEY value should not not have spaces or special character create your random keys in

    https://passwordsgenerator.net/sha1-hash-generator/

Changing Back office URL

By default back office url is **http://yourserver.com/backoffice/admin**
If you want to change this url to something like **http://yourserver.com/myoffice/admin**
Please follow the steps below.

- First rename the folder **backoffice** to **myoffice**
    Take note the folder should not have spaces example **/my office** this will not work
    It should be like **/my-office or myoffice**

- open the file **k-config.php** change the value of **BACKOFFICE_FOLDER**

    example : **define('BACKOFFICE_FOLDER', myoffice);**

- open the file **myoffice/.htaccess** change the folder name **backoffice** to **myoffice**
    example :
    RewriteBase /**myoffice**
    RewriteRule . /**myoffice**/index.php [L]

- now you should be able to access your backend with the new URL
    http://yourserver.com/myoffice/admin

How to download the latest version

- Login to your Codecanyon account.
- Hover over your username from the top right corner and click 'Downloads' from the drop-down menu
- The downloads section displays a list of all the items purchased using your account Click the 'Download' button next to the item and select 'Main File(s)' which contains all
- The downloads section displays a list of all the items purchased using your account Click the 'Download' button next to the item and select 'Main File(s)' which contains all files, or 'Licence Certificate and Purchase Code' for the item licence information only.

How to upgrade to the latest version

For now if your using the old kmrs there is no way to update this, the database has changes in terms of table structure , stay tune I will release a free **addon for migration**.

I advise you to install this new karenderia to separate sub domain or new folder in your server to get familiars with the new version.

Important: since this new update version 2 it has new codes most of your addon will not work anymore So if your already live and using mobile app I advise you to not update until those said addon is also updated.

Update New karenderia Version 2

- **Extract** the **downloaded file** from codecanyon.
- There you will get a zipped folder named '**updates.zip'**. **Upload** that to the root directory on your server in which your previous version is running. **Unzip** that **updates.zip** file by selecting **"Extract here**".
- Now visit the update URL example http://yourserver.com/backoffice/update
  You should see the update page, to update simply click '**Update Now'**
- Finish

Quick guide full setup of your website

In this section I will guide you to the quick minimal setup information that needed to run your website.

Login to your backoffice

- **Fill your website details**
  - Go to site configuration -> Site information
    and fill Title and business address and click save

- **Set your google API keys**
  - Site configuration -> Map api keys
    Choose google maps as provider and enter your Geocoding API Key and Google Maps JavaScript API.
    You can go here https://developers.google.com/maps/documentation/places/web-service/get-api-key on how to get your google api key

    You can create or start your google projects here
    https://console.developers.google.com

    The following API should be enabled in your google projects
    1. Distance Matrix API
    2. Geocoding API
    3. Maps Javascript API
    4. Places API
    5. Maps Static API

    Things to note when creating google api:
    1. you cannot restrict the api key for Geocoding API Key as this key does not show anwhere in your website.
    2. For Google Maps JavaScript API you can restrict this to your domain or server I.p address
    3. Make sure you enabled your google billing account.
    4. In the new version of karenderia the call to google api is lessen compare to old version. Only the api will be called if necessary

- **Setting timezone**
  - Site configuration -> Timezone
    This section is very important as ordering system time is very crucial
    On timezone dropdown select your country timezone
  - Date format – select your desire date format
  - Time Format – select your desire time format
  - Time interval – set the time interval for the customer to select on front end
    This will appear on front end where in the customer can select the delivery time
  - Click save

Things to notes: in Yii framework you can hard code the timezone of your server by opening the file protected/config/main.php   by changing the value of this line 'timezone'=>"Asia/Manila", You ca select from the PHP timezone list https://www.php.net/manual/en/timezones.php

- **Site configuration -> Ordering**
  Enabled the following
    o Enabled ordering
    o Order cancellation
    o Click save

- **Site configuration -> Merchant registration**
  In this section you can enabled the merchant can signup to your site using either membership or commission
    - Merchant registration – enabled the registration
    - Membership program – choose from the list commission and membership
    - Set Specific Country – you can restrict the country that can signup to your website
    Example if you want to only accept from your country Australi just choose Australia in drop down

- **Site configuration -> notifications**
    o Enabled Notification
       enabled this to receive notification from new merchant signup to new order
    o Email address
      Enter your email address that will receive the notification
    o Mobile number
      Enter your mobile number that will receive the notification

- **Membership plans or Subscriptions**
  In this section you will define the plan that merchant can subscribe to your website
    o First you need to add your plan and pricing once you add your plan
      Make sure you set the plans payment ID this can be found in your payment gateway portal

      A video will tutorial can be found for this in video tutorial sections.

- **Payment Gateway**
  in order to receive order from customer you need to add or enabled payment gateway.
  Navigate to admin panel -> Payment gateway and from here you can see the list of available
  Payment gateway for karenderia

  - Choose one of the payment gateway example stripe click edit on the pencil icon ,
    Once edit you will see the form that ask for Payment API credentials just set your stripe
    api like Secret key Publishable key and webhook signing secret key

  - **Enabled payment gateway to merchant .**
    In order to enabled a payment gateway to merchant navigate to Merchant -> list and
    choose the merchant you need to edit and go to Payment settings -> enabled your
    desire payment gateway and click save.

    Things to note: karenderia has 2 different type of merchants
    Commission and membership
    - Commission
      This type of merchant will sale a item in your site and all payment will go to your
      account like stripe paypal etc, in short all payments will be collected by website
      owner.

    - Membership
      Merchant will pay a plan subscription like monthly yearly etc
      And all payments will go straight to merchant account.

      A video will tutorial can be found for this in video tutorial sections on how to
      configure payment gateway.

- **Receiving notification in real time**
  In order to receive notification in real time like for new order new merchant signup etc.
  We need to enabled the real time application by navigating to admin panel -> Third party APP ->
  real time applications

  - Select realtime provide
    Choose pusher as provider and create your account by going to https://pusher.com/ .
    After you successful create your account you need to create a channel and navigate to
    APP keys to get your api credentials.

  - Copy all the credentials and paste in your settings and click saved.

    A video will tutorial can be found for this in video tutorial sections.

- **Set your default Currency**

  - Navigate to admin panel -> attributes -> Currency
  - Choose your currency on the list if your currency is not available you can simply add them by clicking Add new

- **Finish**

- material-design-iconic-font
- google font

Finally

Once again, thank you so much for purchasing this application. As I said at the beginning, I'd be glad to help you if you have any questions relating to this theme. No guarantees, but I'll do my best to assist. If you have a more general question relating to the themes on codecanyon, you might consider visiting the forums and asking your question in the "Item Discussion" section.
